## **Application No. 09/295,966**

## **VERSION WITH MARKINGS TO SHOW CHANGES MADE**

Please amend claims 1, 8, 15 and 26 as follows:

1. (Amended) A system comprising:

a database with entries correlating each of a plurality of user IDs with an individualized rule set;

a dial-up network server that receives user IDs from users' computers;

a redirection server connected to the dial-up network server and a public network, and[-]

an authentication accounting server connected to the database, the dial-up network server and the redirection server;

wherein the dial-up network server communicates a first user ID for one of the users' computers and a temporarily assigned network address for the first user ID to the authentication accounting server; [and]

wherein the authentication accounting server accesses the database and communicates the individualized rule set that correlates with the <u>first</u> user ID and the temporarily assigned network address to the redirection server; <u>and</u>

wherein data directed toward the public network from the one of the users' computers are processed by the redirection server according to the individualized rule set.

8. (Amended) In a system comprising a database with entries correlating each of a plurality of user IDs with an individualized rule set; a dial-up network server that receives user IDs from users' computers; a redirection server connected to the dial-up network server[5] and a public network, and an authentication accounting server connected to the database, the dial-up network server and the redirection server, the method comprising the steps of:

communicating a first user ID <u>for one of the users' computers</u> and a temporarily assigned network address for the first user ID from the dial-up network server to the authentication accounting server; [and]

communicating the individualized rule set that correlates with the <u>first</u> user ID and the temporarily assigned network address to the redirection server from the authentication accounting server;

and processing data directed toward the public network from the one of the users' computers according to the individualized rule set.

## **Application No. 09/295,966**

15. (Amended) A system comprising:

a redirection server programed with a user's rule set correlated to a temporarily assigned network address;

wherein the rule set contains at least one of a plurality of functions used to control [the user's data] passing between the user and a public network; and

wherein the redirection server is configured to allow <u>automated</u> modification of at least a portion of the rule set <u>correlated to the temporarily assigned network address</u>.

26. (Amended) In a system comprising a redirection server containing a user's rule set correlated to a temporarily assigned network address wherein the user's rule set contains at least one of a plurality of functions used to control [the user's] data passing between the user and a public network; the method comprising the step of:

modifying at least a portion of the user's rule set while the user's rule set remains correlated to the temporarily assigned network address in the redirection server.
